**Position:** Postdoctoral associate  
**Place:** La Jolla, California  
**Field:** Neutrophil biology, innate immunity  
**Principal Investigator:** Sergio D. Catz  
**E-mail:** scatz@scripps.edu

**Duties & Responsibilities:** Postdoctoral research positions are available in the laboratory of [Dr. Sergio D. Catz](mailto:scatz@scripps.edu) at the Department of Molecular Medicine, The Scripps Research Institute, La Jolla, California. We are searching for highly motivated scientists to contribute to our research projects designed to study the crosstalk between vesicular trafficking mechanisms and neutrophil function in the context of inflammation and infection. The selected individuals will join our efforts to study the cellular and molecular mechanisms involved in the regulation of vesicular transport, focusing on the roles of small Rab GTPases and their effectors in exocytosis, endosomal maturation and migration. The candidates will use a combination of molecular, cellular, genetic and drug-discovery approaches and will be trained in state-of-the-art microscopy techniques including super-resolution microscopy and on high-throughput screening approaches. Investigators will use genetically-modified mouse models of inflammatory diseases and human neutrophils.

**Requirements:** Ph.D. in cellular biology, immunology or molecular biology. Preferred candidates should have experience in molecular biology and cellular biology. Technical proficiency in confocal and/or TIRF microscopy as well as in flow cytometry, molecular biology and/or biochemical techniques is preferred but not required.

**Location:** The research will take place in the Department of Molecular Medicine at The Scripps Research Institute, La Jolla, California, which provides an outstanding research environment.

**Application:** Interested candidates should submit a CV along with the names and contact information of three references to: scatz@scripps.edu
